

QMetaSync is a simple but powerful tool that can extract NEXIO™ MediaBase information for its easy consumption in other systems.

Basically **QMetaSync** connects to a LLM node and retrieve its MediaBase information using the NEXIO™ proprietary API. Its interface allows to check the connection status with the LLM and also a look of the retrieved MediaBase information:

ID	SOM	Duration	DAR	BitRate	VideoFormat	ARC	Record Date	Modified Date	Status	Title	ASDB

Main Features:

- LLM connection through its proprietary API (Fast DTA Method).
- Export metadata to ADC™ Automation database (ASDB).
- Export metadata to XML files.
- RESTful interface built-in for checking the presence of single IDs in the MediaBase by external systems.
